## AutoCAD ½ Day Course On Advanced Blocks

The aim of this course is to teach the delegate other features that can be used to make your drawing more productive.

We will also show you how to create and use dynamic blocks as well as advanced features such as attributes that allow you to add specific information about a block that can be used within the drawing or exported to an AutoCAD table or Microsoft Excel.

You should already be familiar with how to use blocks via the Design Centre, Tool Palettes and the Insert Block command. You should also know how to create a block. If you do not know how to do this you should attend our full one day course instead, or our ½ day beginners course on blocks followed by his course at a later stage.

All our ½ day courses run from 9:15 to 1:15 with a mid-morning tea break. Lunch is not provided on ½ day courses.

All courseware is provided and is free to take with you.

Attendees of this course should already be able to competently use the basics of AutoCAD .

### Course Content

Some limited functions in **AutoCAD LT**

|                        |   |
|------------------------|---|
